MATERIAL MASTERS

Jacroki[®]

Jacroki® is an exclusive patented product, which wants to be an alternative to the most ordinary materials in various sectors and applications, boasting an ecological DNA due to its composition predominantly made of natural fibres and paper fibres.

Jacroki® products have been developed within the green materials project and are exclusive from Okinawa. They are used for the realization of Labels and Trimmings.

The main component of the raw material is pure recyclable cellulose, primary component of the plant fibres, blended with a small percentage of latex, then customized in different solutions, specific for different uses.

The particular composition of Jacroki® can guarantee an excellent dimensional stability, a high resistance to abrasion, bending and flaking. Particular attention must be paid when Jacroki® is subjected to conditions of tear.

data extrapolated from tests carried out on Jacroki®	
Tested parameters	Characteristics detected
Heavy metals	It does not contain potentially dangerous heavy metals in high concentrations It does not tend to release heavy metals under conditions of acid sweat with limits much lower than those required by class I of OEKO TEX®, the more restrictive category: products in contact with the skin of babies
formaldehyde	It complies with the limits imposed by OEKO TEX® (16 mg/kg) on class I, the most restrictive category: products in contact with the skin of babies
dyes and / or various additives	It does not contain dyes and /or additives, which are banned from the most important ecological brands and / or standards (Ecolabel, OEKO TEX®, REACH)
dry rubbing	It preserves the colour intact under condition of dry rubbing
Martindale abrasion	If subjected to Martindale abrasion it does not present a significant change in surface
Longitudinal and transversal resistance	It has an excellent longitudinal and transversal resistance. Good values of transversal tear

Finishing	characteristics
RACY	it looks and is smooth like paper, it sounds cracking
SOFT	With paper look, soft to the touch, it sounds soft . It is similar to a textile
SHINE	This is a natural process, wax brushed. It looks bright and smooth it sounds soft . It is similar to leather
Available on request	

Jacroki® has been subjected to a series of chemical and physical analysis, biological and mechanical tests and durability tests, by accredited laboratories, who, following the principles laid down by the international technical standards, have led to a complete characterization of the product. According to the tests carried out, we can state that Jacroki® products have the characteristics indicated in the table.

Jacroki® products can be offered under different thicknesses, colours and finishing, with the purpose of satisfying the most demanding and sensitive to environmental issues customers. The finishing today available are listed in table. Wide is the choice of thicknesses and colours, optimized according to the possible applications, with the possibility to have exclusive dyes.

characteristics

The eco-friendly Jacroki® represents an alternative to the most ordinary materials in many sectors and applications, and its versatility makes it suitable for labels and trimmings, fashion accessories, interior design, furnishing, automotive and many more.

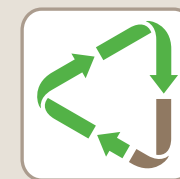

Jacroki® products can be washed, ironed, wrinkled, printed, sewn and embroidered (with some precautions).

Jacroki® is manufactured with the best available technology and with processes at the forefront in step with the growing demand for sustainable products with reduced environmental impact. Composed mostly of natural fibres, Jacroki® is the most innovative in the panorama of eco-friendly products.

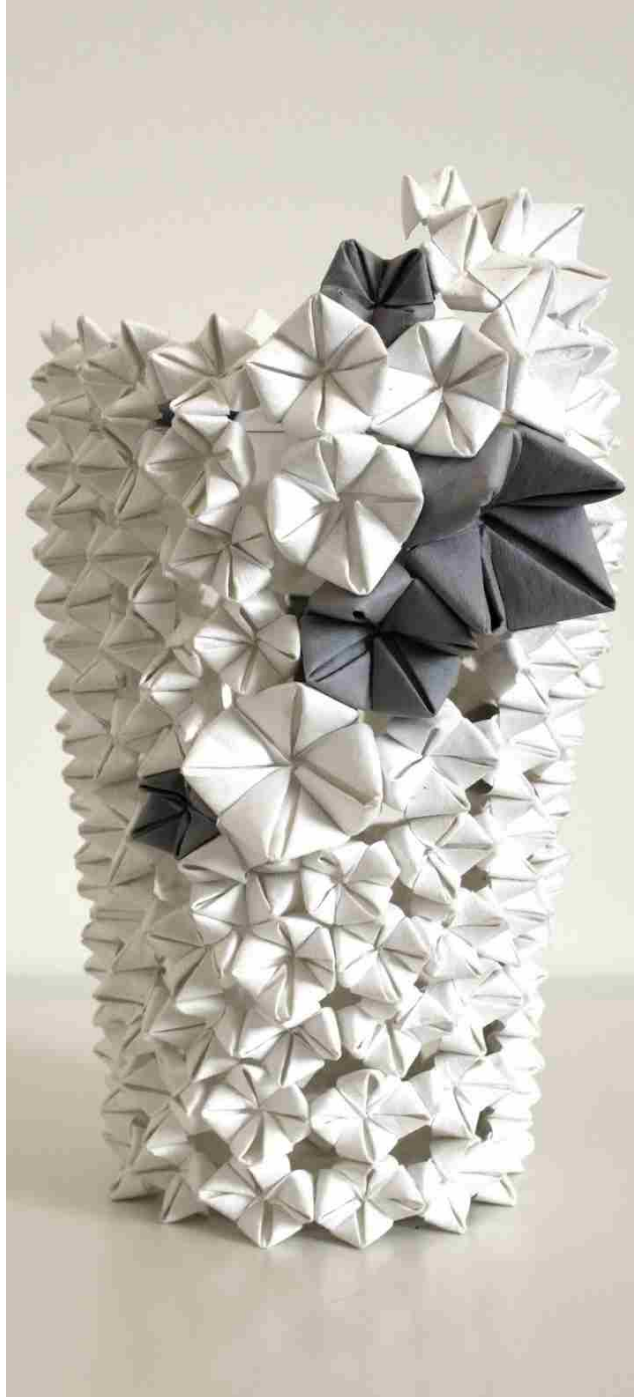

Thanks to the cooperation with established customers, the logistics and manufacturing chain is able to serve all the areas of interest, ensuring high standards of quality, good service and environmental respect.
